

## SECTION

Protect planting with stock proof fencing, where required.

Clear tree/shrub positions of all grass and weeds minimum 1 metre diameter per plant either by hand or by using glyphosate herbicide according to manufacturers instructions.

Use cell grown or container grown plants.

Pit or notch plant into prepared ground at 1–1.5 metre centres with shrubs in irregular groups towards the outside edge. Avoid planting in straight rows. This density is equivalent to .44 – 1 plant / msq or 4400 – 10,000 plants / hectare.

Attach rabbit netting to fence and/or use tree shelters to protect against rabbits where required.

Maintain tree/shrub positions weed and grass free for a minimum period of 2 years post-planting to ensure establishment.

## PLAN

Some suitable species:

### Shrubs

Amelanchier species  
 Crataegus species (hawthorn)  
 Buddleia species  
 Cornus species (dogwoods)  
 Cotoneaster species  
 Euonymus europaeus  
 Hippophae rhamnoides  
 Philadelphus species  
 Potentilla species (low growing)  
 Ribes species  
 Sambucus species (elders)  
 Spiraea species  
 Symphoricarpos species (snowberries)  
 Syringa varieties (lilac)  
 Viburnum species

### Smaller trees

Alnus species (alders)  
 Betula pendula (silver birch)  
 Sorbus aucuparia (rowan)  
 Sorbus species (whitebeam etc.)  
 Laburnum species  
 Malus species (apples)  
 Prunus species (cherries)

### Evergreens

Eleagnus ebbingei  
 Escallonia species (privet)  
 Ilex aquifolium (holly)  
 Ligustrum japonicum (privet)  
 Prunus laurocerasus (laurel)  
 Prunus lusitanica (Portuguese laurel)  
 Viburnum species
