

SECTION

Where necessary to protect against browsing provide stock and rabbit proof fence on either side of hedge or protect with heavy canes and spiral guards.

Provide 1 metre wide weed and grass free strip for hedge.

Cultivate trench 0.45m wide x 0.45m deep. Add compost and fertiliser as required.

Plant hedge plants in single row at 0.45m centres.

Use cell grown or bare rooted plants.

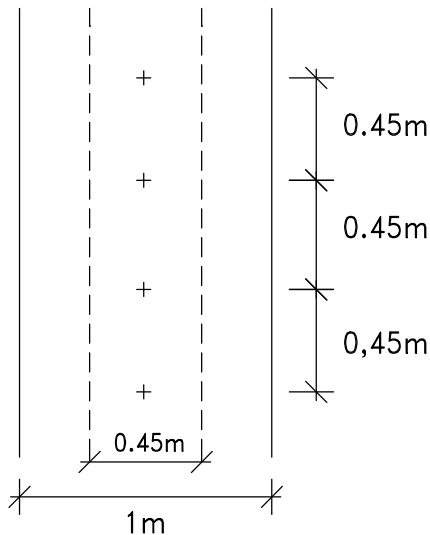

To protect bare rooted plants from drying out keep roots covered until immediately before planting and use root dip.

Maintain weed and grass free for a minimum of 2 years post-planting to ensure establishment.

Trim hedge to 'A' shape profile outwith the bird nesting season. Consider hedge laying as alternative for some rural hedges.

PLAN

1 Metre wide weed and grass free strip

**Some Suitable Species**

<u>Species Name</u>	<u>Common Name</u>	<u>Species Name</u>	<u>Common Name</u>
<b>Deciduous</b>		<b>Evergreen</b>	
Berberis Spp*	Barberry	Berberis spp	Barberry - some varieties
Carpinus betulus	Hornbeam	Cotoneaster spp	Cotoneaster - some varieties
Cotoneaster spp	(larger forms)	Escallonia spp	Escallonia
Crataegus monogyna*	Hawthorn	Ilex aquifolium*	Holly
