WALK THE DONALDS SUB MUNRO HILL LIST

Donalds are hills between 2000 and 3000 feet situated south of the Highland fault boundary. The decision as to which ones should be included was governed by a complicated formula. Hills were differentiated from tops by means of a complex algorithm involving 17 'units', where a unit comprises 1/12 of a mile or 50 feet.

On 27th September 1922, at the age of thirty, Percy Donald applied to join the Scottish Mountaineering Club (SMC). At the time he was living in Leamington Terrace, Edinburgh. In volume 20 of the Scottish Mountaineering Club Journal is recorded that Donald climbed all 'his' hills, 133 summits at the time, in 167 days, 27 of these were spent on the hill.

Donald was fastidious about numerical detail and made the following observations; he calculated his total mileage at 396, his footage at 89,300 and, rather more recondite, his average cost per hill was 2s 9d and per top 1s 10d.

THERE ARE PRESENTLY 89 DONALDS IN TOTAL, 38 OF THESE ARE WITHIN THE SCOTTISH BORDERS REGION.
